RE: MB Docket No. 04-160.

I would like to file my personal and professional support, along with the support of the managers who work for me throughout the Southeast Region for the NAB Petition seeking a Declaratory Ruling on Satellite radio's broadcasting local traffic and weather, along with their future plans to expand their reach into local radio.

- In granting licenses for satellite radio, the FCC relied on the express promises by XM Radio Inc. ("XM") and Sirius Satellite Radio Inc. ("Sirius") that their service would be national-only. They would provide multiple foreign language programming, senior citizens and children's programming, etc.
- Because satellite radio would be national, local broadcasters would not be harmed.
- Now XM and Sirius have blatantly broken their promises, launching "localized" traffic and weather service in the top twenty-one markets. *This is only the beginning.*
- It is clear from the comments they filed in opposition to the NAB Petition that XM and Sirius view the sky as the limit — with technology to continue to "localize" their services they can make their formats virtually indistinguishable from local radio.
- Without FCC intervention, two companies, with 120 channels each, will reach into every market and try to mimic what local broadcasters do.
- We take our responsibility seriously. For instance, in South Florida we provide a service called Storm Net. 26 radio stations in my region work together to provide the most comprehensive storm coverage possible. We have a web site for tracking storms, and we have a system put together for running watches, and warnings from Key West to Vero Beach. Our coverage is free to consumers, and is promoted heavily on our radio stations to millions of radio listeners each week. The cost of this coverage is very dramatic both in airtime loss, and in terms of personnel and advertising space. Similar services take place in Louisiana, Alabama, and other parts of Florida - we have the severe weather of the Gulf of Mexico and the southern Atlantic seaboard covered.

- Satellite Radio doesn't have public interest limits or ownership limits. They have no *local* investment in their communities.
- The \$9.6 billion broadcasters gave to their local communities in 2003 speaks volumes to our commitment to public service.
- Our South Florida clusters of radio stations provide intense and dramatic services to the communities within our coverage. Our many charitable endeavors raise millions of dollars for programs who otherwise would go with less funding. We support local community drug rehabilitation programs, local fundraising for animal shelters, the daily food banks, etc. These programs and initiatives could be threatened by the expansion of satellite into our local markets to duplicate our efforts and programs, that are now available for free.
- FCC, in authorizing satellite radio, vowed to protect "vibrant" local broadcasting, and promised to take "any necessary action to safeguard the important service that terrestrial radio provides." **That time is now.**
- Before XM and Sirius invest millions of dollars in technology, and further raise consumer's expectations about their ability to receive specific content, the FCC must clarify it authorized a national-only satellite radio service.

As a radio broadcaster with 35 years of experience in every facet of this wonderful business, and service to local communities, I feel very confident that local radio provides coverage and provides excellent service. I support the NAB petition.

Sincerely,

A handwritten signature in cursive script that reads "Jay Meyers".
